

TAMARA MACK

UI/AI Engineer

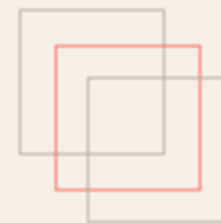

Designing human-centered interfaces for
systems that think, act, and create.

Portfolio overview | August 2026

LIKWIDMACK

Creativity becomes credible when the interface makes intelligence understandable.

01

Design clarity

Frame fuzzy intent as visible goals, states, constraints, and next actions.

02

Interface systems

Translate concepts into accessible components, motion rules, and production-ready code.

03

Responsible AI

Expose approvals, failure recovery, privacy boundaries, and the evidence behind decisions.

The through-line: human judgment stays legible at every layer.

A browser playback system designed as product infrastructure.

Role

UX/UI software engineering across playback states, controls, accessibility, testing, and implementation seams.

Evidence

MSE / HLS package architecture
Unit-tested utility boundaries
Media-player demonstration route

System design, seen from the interface

Playback quality is not only a streaming concern. Buffer state, timing, captions, focus, and recovery all become user experience.

Manhattan 2150 turns speculative technology into one polished proof scene.

One strong shot now

A finished landscape frame establishes material, atmosphere, movement, and the human scale of the world.

Six-shot logic retained

The storyboard remains a compact narrative map. Full film production moves to the post-launch NVIDIA / local RTX pipeline.

CREATIVE DIRECTION + 3D / XR + GENERATIVE AI

The agent can propose. The visitor decides when anything advances.

TRANSPARENCY

Named states and explicit pending action

RECOVERY

Reject, restart, or deterministic replay

PRIVACY

No raw prompt text in analytics or server logs

PUBLIC DEFAULT: deterministic replay | **OPTIONAL LIVE:** server-side Responses API with strict structured outputs and read-only tools

The public artifact is the decision - not the private conversation.

CHATGPT

Agentic UI

Make the approval boundary visible before generation.

ADOBE

Manhattan 2150

Polish one proof scene; preserve the six-shot plan.

CODEX

Portfolio build

Use an isolated worktree, typed schemas, tests, and scoped commits.

GITHUB

Outcome evidence

Publish sanitized outcomes; withhold links until anonymous access is verified.

SANITIZED ONLY | no task IDs | no full transcripts | no secrets | no personal paths | no private financial content

A portfolio built like a product system, not a static gallery.

Nuxt 4

Typed content, routes, Nitro APIs, SEO

NX

Monorepo targets, libraries, tests, CI

THEME + UTILITIES

Shared tokens, contrast helpers, browser-safe boundaries

AWS SAM

Lambda, HTTP API throttling,
DynamoDB, S3 + CloudFront

Launch qualities

- Accessible personalization
- Deterministic AI fallback
- Privacy-filtered content
- Production-safe environment contract
- Unit and Cypress coverage
- Canonical metadata and structured data

237 unit tests passing

LET'S BUILD THE INTERFACE

Senior UI/AI roles. Select product and creative-technology engagements.

I bring product judgment, visual craft, frontend systems thinking,
and an explicit model for human control in AI experiences.
